

Are you a man
turning
65?

Look out for
your invite
for your AAA
ultrasound
scan through
the post.

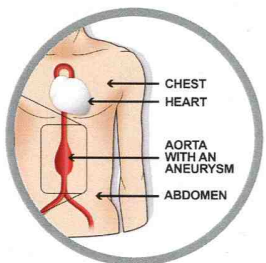

The ultrasound scan won't take long

It takes about ten minutes to perform the screening.

It's a simple and comfortable procedure

A hand held ultrasound scanner runs over the surface of the abdominal area.

It could save your life

An Abdominal Aortic Aneurysm (AAA) scan checks for swelling of the aorta. There are usually no symptoms and if left undetected, it can rupture, **which could be fatal.**

If you're over 65 and have not been screened, please get in touch:
